---

What if we add this paragraph?

"EPA is currently in the process of developing toxicity values for trichloroethylene in indoor air; however, recent scientific research indicates that homes with concentrations between 1.2 ug/m3 and 10 ug/m3 should be evaluated for mitigation due to the potential for increased cancer risk from exposure to trichloroethylene at these concentrations for many years. The Texas Commission on Environmental Quality recently established a protective concentration limit of 10 ug/m3 of trichloroethylene in indoor air."

Then the next paragraph (already in the fact sheet) would be:

Based upon the data collected from the Delfasco Forge Site, some homes will require mitigation to reduce trichloroethylene concentrations in the indoor air. To limit exposure and to reduce trichloroethylene concentrations, EPA is offering to install exhaust fans in homes that had, or are expected to have, elevated trichloroethylene levels in indoor air.
